

Authorization to Use PACCAR Fleet Telematics Data for Academic Research

Doctoral Dissertation Research — Data Use Request and Acknowledgment

Dissertation Title

Cross-Manufacturer AI Prognostics for Heavy-Duty Trucking

Requested By

Jeanne Denmark, PACCAR employee and doctoral candidate

Faculty Advisor

Dr. Aledhari

PACCAR Supervisor / Approver

Francisco Nunez

Purpose

I am requesting authorization to use PACCAR's proprietary fleet telematics data in support of my doctoral dissertation research on AI-based telematics and prognostics for heavy-duty trucking. The dissertation is structured around four studies: (1) cross-manufacturer transfer learning for predictive maintenance, (2) privacy-preserving federated learning across fleets, (3) stakeholder interpretation of AI model outputs, and (4) linking vehicle health data to safety outcomes using public FMCSA and NHTSA data.

PACCAR telematics data is streamed via J1939-connected devices into Snowflake. For this research, I am requesting access to vehicle-level sensor and component health data sufficient to support predictive-maintenance modeling, in combination with two public benchmark datasets (the SCANIA Component X dataset and the Volvo Discovery Challenge dataset from ECML-PKDD 2024) so that the core findings remain defensible on public data alone, with the PACCAR dataset used to strengthen and validate those findings.

Data Protection Commitments

In using PACCAR fleet telematics data for this research, I commit to the following:

- No customer data of any kind will be accessed, extracted, or used in this research. This includes customer names, account information, contact details, billing information, or any other data that identifies or relates to a specific customer or fleet owner.
- Vehicles will be referenced only by the last six (6) digits of the Vehicle Identification Number (VIN). The full VIN will not be recorded, stored, exported, or published in any research artifact, dataset, paper, or presentation.
- No personally identifiable information (PII) about drivers, customers, or other individuals will be collected or retained.

- Data will be used solely for the stated academic research purpose and will not be shared outside the dissertation committee, research collaborators bound by the same restrictions, and any publication venues, without separate written approval.
- Any published or externally shared results will be reported in aggregate or de-identified form, consistent with the restrictions above.
- I will comply with all applicable PACCAR data governance, confidentiality, and information security policies in accessing and handling this data.

Target Publication / Dissemination

Initial findings are targeted for submission to the PHM Society Annual Conference Doctoral Symposium, with the understanding that any data or figures derived from PACCAR telematics data will conform to the data protection commitments above prior to submission.

Acknowledgment and Approval

By signing below, I acknowledge the commitments stated above, and my PACCAR supervisor acknowledges and approves my use of PACCAR fleet telematics data for the dissertation research described in this document.
